

Coala Life is proud to announce certification according to new ISO 27001:2022 standard

Coala Life has passed an independently performed security review through an external audit and received its ISO 27001 re-certification according to the new updated standard of ISO 27001:2022.

The ISO (International Organization for Standardization) is an independent, organization that sets global standards for security and safety. ISO 27001, which is part of a family of standards (27000) related to information security, is the world's best-known standard for information security management systems (ISMS). It covers aspects such as risk management, access control, data backup, and business continuity. It includes requirements for the implementation, maintenance, and ongoing improvement of a company's information security system.

"We are happy to receive the new certification according to ISO 27001:2022. We are very serious about the protection of sensitive information of our internal and external stakeholders and patients. I am grateful to see that the hard work and efforts we put into protecting our data is recognized and this certification shows that our processes for information security management are to the highest recognized standard," says Dan Pitulia, CEO, Coala Life AB.

About us

Coala-Life Group AB ("Coala Life" or the "Company") founded in 2015, is a Cloud Based Software as a Service provider, and medical device developer and reseller, listed on Nasdaq First North Growth Market. The Company focuses on B2B solutions for managed Remote Patient Monitoring ("RPM"), offering medical care providers, primarily in the US, with a highly scalable, cost-efficient platform to remotely and virtually manage large volumes of patients suffering from chronic diseases. The company offers care providers a comprehensive solution and lifts the administrative work from the care providers regarding, amongst other things, follow-up, 24/7 monitoring, as well as the reimbursement process from state and private health insurance companies. Patients are monitored long-term in everyday life and typically have diabetes, obesity, and /or cardiovascular disease.
